WHAT'S IN THE BOX:

- (1) Call Blocker Unit
- (1) Telephone Patch Cable
- (1) User Manual

INSTALLATION:

Installing/Replacing Batteries (Optional but recommended):

This device is powered by your phone line but uses batteries as backup. The batteries are also required for the LCD Blue Backlight to work, and to retain the date/time information when unplugged from phone line.

To install/replace the batteries, open the battery cover located in the back of the unit and insert three (3) AAA batteries (not included). Please note the correct positioning (+ and -).

Installing the Call Blocker:

Connect your phone line to the "LINE" port coming from wall or from your phone service provider and then use small cord to connect "PHONE" port or socket directly to actual phone set as shown in the figure below:

From telephone jack or modem
(C.C Line from the phone company)

PROGRAMMING

PREPARATION: Before programming your call blocker, you will need the following:

- 1) A telephone handset connected on the PHONE socket of the Call Blocker.
- 2) You also need to be able to hear dialtone through the connected handset. You will need to use your handset's dialpad to program your call blocker.

1) Setting date and time (optional)

Important: The month, day and time is constantly updated automatically as provided by the caller id data of incoming calls. Follow the instructions below to manually update this information.

When in standby mode (e.g. when showing the month, day, and time (hour & minutes) in the upper center of the display), please press and hold **the left side** of the [UP/SET] button for 3 seconds, the LCD screen should display: Date Set, then press the [ACCEPT/WHITE LIST] button, the month should be flashing in the LCD, then use the [UP/SET] and [DOWN] button (left of right side) to adjust the digits up and down, then press the [ACCEPT/WHITE LIST] button to confirm and adjust the day, then the hour and the minutes.

2) Setting the voice (optional)

When in standby mode, please press the [VOICE/A/B/C/OFF] button, then we could switch the voice function, you could see the [A/B/C/OFF] in the top right corner.

All for four choice: A. English B. Spanish C. German D. OFF (default set)

Important: When you turn this feature ON (A, B, C), new callers (e.g. phone numbers that have not been registered) will not be able to ring your phone. Only numbers that have been registered in the Whitelist (ACCEPTED) will ring. All other calls will be disconnected. Voice recording will play 3 times and then the calls will be disconnected.

3) Browsing Incoming Call Numbers

When in standby mode, please press the [DOWN] button (right side) to browse the incoming phone records. The LCD screen will display incoming call numbers, the date and time of each call, NEW calls or not. Press the [UP/SET] and [DOWN] buttons to review recent incoming call records.

- 4: While browsing the black list numbers, when a number show on LCD display, press and hold the [BLACK LIST] button for 3 seconds, LCD screen would display “DONE”, it has been stored to black list numbers.

NOTE: Numbers will show in the black list or white list according to the last operation.

13) Blocking Incoming Calls

There are 2 ways of blocking incoming calls:

1. When a call is incoming, please press the [BLACK LIST] button one time, LCD screen would display “DONE”, it means this number has been stored to black list numbers, and then it would show a very fast pick up and hang up

calls.

2. When you receive an incoming call, simply please press “*0” button on the handset (connected on the same phone line in series or parallel). The blocker’s LCD screen would display “DONE”, it means this number has been stored in the black list. Calls from numbers in the Black List are blocked automatically (disconnected) if numbers call again in the future.

14) Block Calls with NO Caller ID (e.g. Unknown, 000-000-0000, Out of Area)

While on standby mode, press and hold the [BLACK LIST] button for 3 seconds, the LCD screen would display: Date Time, then press the [DOWN] button 2 times to show ‘Block No Cid’, then press [ACCEPT] button. The LCD screen should show “ON” or “OFF”. Use the [DOWN] button to change, as desired.

15) Turning ON/OFF the Voice Recording Feature

While on standby mode, press the [VOICE] button to switch the VOICE recording to A (English), B (Spanish), C (German), or OFF (default). When the VOICE feature is on A, B or C, all incoming calls that are not White List will be hear this recording. The recording will play 3 times, and then disconnect the call. Your phone will only ring for numbers in the White List – Welcome to total privacy!

You can also modify this setting via the programming menu.

16) Blocking Area Codes

You can block up to 20 area codes (or prefixes up to 10 digits long) you wish to block. To add area codes, follow the steps: Press and hold the [UP/SET] button (left side) for 3 seconds then press [DOWN] button once to find ‘Block Set’. Then press [ACCEPT] button accept, then it shows C01-----, then press [DOWN] button to set the first area digit (choice 0-9 by pressing down button) once confirm then pressing the [ACCEPT] button, then set the second digit ... etc. When done press the [ACCEPT] button once again. Repeat these steps to program area code C02 - C20). Note: Some carriers in the US are still sending the 1+area code. So, you may need to block 1XXX instead of just the area code XXX.

17) Parallel Telephone Pick up the Handset to Make a Call

When the parallel telephone picking up the handset, the blocker’s LCD screen display “-” and flashing and begin time accounting; The blocker’s LCD screen display the dialing number; After hanging up the phone, the blocker would store the dialed number and call duration to outgoing call numbers.
